

BridgeEDI — Client Test Workflow

Production client handoff · <https://www.bridgeedi.com> · ~30–40 min

Purpose: End-to-end checklist to verify the first-customer experience on production.

Environment: Production — <https://www.bridgeedi.com>

Branch deployed: phase12-first-customer-ready

Estimated time: 30–40 minutes

What you should see

Area	What to expect
Admin login	https://www.bridgeedi.com/ — operator console
Sidebar (admin)	Dashboard, Generative AI, Invoices, Customers, Workspaces , Customer users, SAT, Account Mapping, Supplier Tokens, Settings — no Quotations
Customer portal login	https://www.bridgeedi.com/customer/login — separate portal door
Create customer	Workspace settings created automatically
Create customer user + assign	One form; customer IDs readable (high contrast)
Workspace Settings	ERP, government, adapter, pipeline, readiness wizard
Pipeline gate	Cannot enable until ERP + adapter + government are ready
Customer portal	Overview → Invoices → SAT → Monitoring → AI Ops → Settings → Logout
Isolation	Customer cannot stay on admin pages
AI Ops	Explains operations — does not send invoices

Credentials (fill in before the session)

Role	URL	Email	Password
Admin / operator	https://www.bridgeedi.com/	---	---
Customer portal user	https://www.bridgeedi.com/customer/login	---	---

Use a real portal user assigned to **one** customer ID (created in section A), or a demo user provided by BridgeEDI.

A. Admin path (15–20 min)

Base URL: <https://www.bridgeedi.com>

#	Step	Expected
1	Open <code>/</code> and sign in as admin	Dashboard loads; sidebar shows Workspaces ; Quotations is absent
2	Open Customers → Add Customer	Form readable; create succeeds
3	Open Customer users → Create customer user	Modal: dark text on white; customer IDs readable; Cancel readable; Close (X) visible
4	Assign one customer ID → Create	User appears in list with that assignment
5	Edit customers on that user	Same contrast; Save works
6	Open Workspaces → select the customer → Settings	Readiness wizard + progress % visible
7	Configure ERP URL + secret refs, adapter <code>mx_cfdi</code> , government endpoint → Save	Checklist / progress advances
8	Enable Pipeline (only if unlocked) → Save	Succeeds when ready; if incomplete, blocked with a clear message
9	From the workspace shell, open Monitoring / AI Ops	Page loads; counts or activity visible when data exists
10	Logout	Returns to admin login

Fail if: ghost-white text on white modal; customer IDs unreadable; pipeline enables with empty ERP/government; Quotations still in sidebar; Workspaces missing.

B. Customer path (10–15 min)

#	Step	Expected
1	Open https://www.bridgeedi.com/customer/login	Customer Portal branding (not admin login)
2	Sign in as the portal user	Lands on <code>/customer/overview</code>
3	Confirm only their company / customer ID	No other tenants' data
4	Walk Overview → Invoices → SAT → Monitoring → AI Ops → Settings	All pages load; no "Coming Soon"; no admin sidebar
5	Manually open <code>/dashboard</code> or <code>/customers</code> while logged in as portal user	Redirected back to portal (brief spinner only — no admin chrome flash)
6	Open Settings	Configuration is read-only for the customer
7	Logout	Returns to <code>/customer/login</code>

Fail if: admin menu visible; other customer data visible; blank/broken pages; "Coming Soon" on portal routes.

C. Contrast / UX smoke (2 min)

On a machine with **OS dark mode ON**:

- 1. As admin, open **/customer-users** → **Create customer user**
- 2. Confirm modal body is light (white) and text is dark
- 3. Confirm Assign list customer IDs are dark monospace (not washed-out grey)

D. What this product does (one paragraph for stakeholders)

BridgeEDI gives your company a private login and portal. Our team onboards you in the admin console (customer, users, ERP, government, pipeline). Your users only see your invoices, tax documents, monitoring, and settings. AI explains operations — it does not send invoices. To go live we plug in your real ERP and government credentials in the same Workspace Settings screens.

Sign-off checklist (send back)

- ☐ Admin login works; **Workspaces** in sidebar; **no Quotations**
- ☐ Create customer works
- ☐ Create / assign customer user modal readable (dark-mode OS OK)
- ☐ Workspace Settings + readiness wizard works
- ☐ Pipeline blocked until ERP + adapter + government ready
- ☐ Customer portal login + full nav works
- ☐ Isolation verified (portal user cannot use admin pages)
- ☐ Monitoring / AI Ops pages load
- ☐ No “Coming Soon” on portal path
